CLINICAL YOUTH HEALTH (PAEDS 712)

Semester One & Two: Core skills in youth health including: effective engagement, assessment & intervention skills for working with young people in a range of clinical or community settings. This course has some content on line, with block teaching days available either in person or via zoom.

POPULATION YOUTH HEALTH (PAEDS 732)

Semester One: This course aims to prepare students for a role in youth health in a variety of location and sectors. In doing this, students are exposed to current research and practice relating to population youth health and evidence-based health care. This course is taught with blend of on-line and one day block teaching available either in person or via zoom

HEALTH, EDUCATION AND YOUTH DEVELOPMENT (PAEDS 719)

Semester Two: This course offers insights and strategies to work with young people in the rapidly developing health and education sector interface. This course will be taught with a blend of on-line and on campus delivery (2 days). This course is highly relevant for health professionals working in schools.

CLINICAL CARE OF ADOLESCENTS AND YOUNG ADULTS WITH CANCER (PAEDS 721)

Semester One This is an applied clinical course for health professionals who care for adolescents and young adults with cancer. This course requires that students have previously completed PAEDS 712 or are currently enrolled in PAEDS 712. The students who wish to enroll in PAEDS 721 needs prior approval by course coordinator Heidi Watson.
