FACULTY OF MEDICAL
AND HEALTH SCIENCES

Centre for Youth Health

CLINICAL YOUTH HEALTH (PAEDS 712)

Semester One: Core skills in youth health including: effective engagement, assessment & intervention skills for working with young people in a range of clinical or community settings. This course has some content on line, with 3 contact days.

Population Youth Health (PAEDS 732)

Semester One: This course aims to prepare students for a role in youth health in a variety of location and sectors. In doing this, students are exposed to current research and practice relating to population youth health and evidence-based health care. This course is taught with blend of on-line and on campus delivery (1 Day).

HEALTH, EDUCATION AND YOUTH DEVELOPMENT (PEADS 719)

Semester Two: This course offers insights and strategies to work with young people in the rapidly developing health and education sector interface. This course will be taught with a blend of on-line and on campus delivery (2 days). This course is highly relevant for health professionals working in schools.

CLINICAL CARE OF TRANSGENDER AND GENDER DIVERSE YOUNG PEOPLE (PAEDS 710)

Semester One: This course is for health professionals who care for transgender and gender diverse young people. You will develop and advance your skills, knowledge and expertise in the clinical care of transgender and gender diverse people. The course will cover the epidemiology and development of transgender and gender diverse identity in children and young people; How to best assess and support transgender and gender diverse identity in children and young people; In-depth aspects of the medical and surgical care of transgender and gender diverse young people; Ethical and management issues in caring for transgender and gender diverse people. The course is delivered over three one day block sessions and one half day for case presentations. This course requires that students have previously completed PAEDS712 or are currently enrolled in PAEDS712.
