

CONSENT TO RELEASE INFORMATION (CANCER)

The intention of this form is to gather accurate information about the cancer in your family. In order to do this, we need to confirm the diagnoses within the family. **Please see overleaf for further information on this.**

Full Name:			
Address:			
Telephone: Home:		Work:	
Date of Birth:		Hospital Number:	
If deceased date of death: _			
Date of Diagnosis	Cancer Diagnosis	Hospital Name / City

CANCER RISK ASSESSMENT PROCESS

Our service meets with individuals to assess whether their family history puts them at any increased risk for cancer. When assessing a family history of cancer, we consider whether the cancer is more likely to have occurred by chance (because cancer is common in the general population), or whether there could be an inherited susceptibility being passed through the generations.

Only about 5–10% of all cancers are related to an inherited susceptibility. Some of the features that increase the likelihood of an inherited susceptibility to cancer include:

- Several close relatives on the same side of the family with the same type of cancer.
- More than one primary cancer in the same person.
- Young age at cancer diagnosis (e.g. breast cancer under 40 years, colon cancer under 50 years).
- A cluster of cancers that are known to be associated with specific genes (e.g. there is an
 association between breast and ovarian cancer, there is an association between
 colorectal and uterine cancer).

If we suspect the presence of an inherited cancer syndrome, we provide families with information about the condition and its inheritance. We may suggest appropriate screening to help manage any increased risk of cancer. Sometimes we offer genetic testing to a family member who has had cancer in an attempt to identify the genetic cause for the cancers that have occurred. If we are able to identify a genetic cause, we are then able to offer testing to other members of the family to clarify their risks of developing cancer.

To assess a family's risk of cancer we ask those affected by cancer, and close relatives of people who have died from cancer, to allow us access to pathology reports. If you are willing to provide access to these records please complete and sign this form. Please be as specific as possible about dates of birth, dates of death, previous names, type of cancer, and place of treatment, as this information makes tracing records easier and our overall assessment more accurate. However, if you do not have all of this information, we may still be able to access records if you are able to provide us with the name and date of birth of your relative.

If you would like to discuss any aspect of this process, please feel free to contact Genetic Health Service NZ
